### **AIR-board® Translucent Lightweight Rigid Decorative Panels**

Allplastics offers you AIR-board® Decorative Panels. With its unique combination of aesthetically pleasing effects and stunning design it creates numerous opportunities for innovative concepts.

AIR-board® is available in a range of different honeycomb core structures which allow for a variety of design options such as ceiling panels, design and display applications, awnings, wall partitions etc.

Allplastics offers a wide range of different AIR-board® varieties such as AIR-board® UV PC, satin AIR-board® UV PC and metal AIR-board® UV PC products with coloured cores or aluminium honeycomb cores.

We also supply AIR-board® Acoustic (sound absorbing) which are used to improve the room acoustic and sound absorption for special projects. Allplastics grants a 10 year warranty for all AIR-board® Decorative panels.

### **Waterproofing with Projex Group**

Projex Group Pty Ltd has a reputation for supplying and installing products and systems to meet the demand for the highest level of waterproofing.

Projex originally introduced the Wolfin Waterproofing system in Australia in 1988. Wolfin is a flexible Polyester PVC waterproofing membrane.

Wolfin has been regularly used for waterproofing Roofs (including Green Roofs & Roof Gardens), Balconies, Decks, Podium Slabs, Terraces, Planter Boxes, Basements, Lift Pits, Water Tanks & almost all areas where waterproofing is required on buildings, whether it be residential, commercial or engineering projects.

Wolfin can be applied to most substrates including concrete, timber, steel, CFC, masonry blockwork etc.

### **Fenix NTM available from Nover**

Fenix NTM (nanotech matt material) is produced using next generation resin developed with the help of nanotechnologies to provide this new material with novel properties..

Fenix NTM is super matt, fingerprint resistant, repairable (micro scratches) and allows you to control fabrication in house. With a real design shift coming from Europe towards matt finishes, Fenix NTM is bound to be a real winner with consumers.

## Safetyline Jalousie

This 8 level block of student accommodation is located on busy Gardeners Road in Kingsford, NSW. The floor to ceiling curtain of louvres on the balconies creates a unique and versatile indoor/outdoor space for residents with uninterrupted views of the surrounding area.

The architect, Max Sgammotta, was impressed by the robust inbuilt security feature of the louvres which provides a safe and secure living space for students. While other louvre window alternatives can fit security bars to their windows, the bars are external and are therefore more prone to damage and less aesthetically pleasing.

Louvre windows deliver ultimate control of the airflow to the apartments, allowing cool breezes in during the warmer month, and keeping cold air out in winter.

The window seals that feature on 4 sides of each louvre blade also provide an effective acoustic barrier from the peak hour traffic noise below and protection from the southerly winds.

## Governments plan to make our cities greener and cooler

Although we may not be fully acquainted with the phenomenon that is urban heat island, we're all familiar with its effects - the change in temperature between the concrete jungle of the city compared to the rolling hills of the countryside.

The Turnbull government has a plan to help cool down our cities with the goal to improve the quality of life and to lessen the environmental impact of the rising temperatures.

The plans include increasing the amount of tree cover and green roofs, which has the potential to reduce the temperature by 10°C. With the increase in trees planned, the surrounding paving, will also need to be assessed. For the trees to not only survive but to flourish, they will require a healthy root zone with adequate transfer of water and oxygen.

**StoneSet is the solution** - providing hardwearing paving suitable for urban areas that maintains a fully porous surface enabling the trees to flourish while cooling the paving through evaporation. Porous paving also reduces the surface water run off that can lead to flooding and pollution.

To find out more about how StoneSet can benefit your project: [www.stoneset.com.au](http://www.stoneset.com.au)

## Moondani Glass Design - Art Project

Project Name: UrbanGrowth NSW - Bungaribee

Artist: Bronwyn Berman

Materials: Glass and Stainless Steel

Description: Hexagonal shaped laminated glass with bees deep carved into glass marks the entry feature for the play grounds at a Bungaribee, a new Sydney suburb within the City of Blacktown.

Moondani Glass Design manufacture architectural glass and are experts in formed, carved and colour fused glass.

## SI Retail - Full Store Fitouts

LORNA JANE

Lorna Jane, a premium women's athletic wear provider, was expanding globally and needed custom retail environments that could be built and delivered within 40 days.

Store in a box

Starting with a Brand DNA Audit, we pioneered 'store in a box' – a new way to deliver full store fitouts quickly, anywhere in the world. Thanks to this technique, Lorna Jane stores can now be delivered within 40 days and opened within just one week of delivery.

More than 100 stores have been launched successfully in Australia, South Africa, Sweden UAE and USA.

## Stainless Steel Powder Coating

Did you know we offer powder coating options for most of our products?

Often clients require the strength and vandal resistance of stainless steel but prefer the softer feel of a ceramic finish. Now you can have both (other colours available please consult BRITEX).

This Security Recessed Basin is for the James Nash House Mental Health Facility in South Australia. In these sensitive environments a reflection-less surface is preferred.
