REPLACING YOUR WHEELS AND ROLLERS

The Cowdroy range of replacement wheels, rollers and parts are ideal for those worn, stubborn or dysfunctional sliding windows and doors. Common symptoms of malfunctioning sliding components include the following:

- Excessive noise or grinding sound
- Extensive wear and tear on tracks
- Windows or doors do not slide freely
- Windows or doors feel bumpy when sliding
- Windows or doors are jammed

It is generally recognised as good maintenance practice to replace components in sets (e.g. pairs of rollers or guides)

Many rollers are adjustable and often actuated by either a screw or a nut. Some roller assemblies are spring loaded.

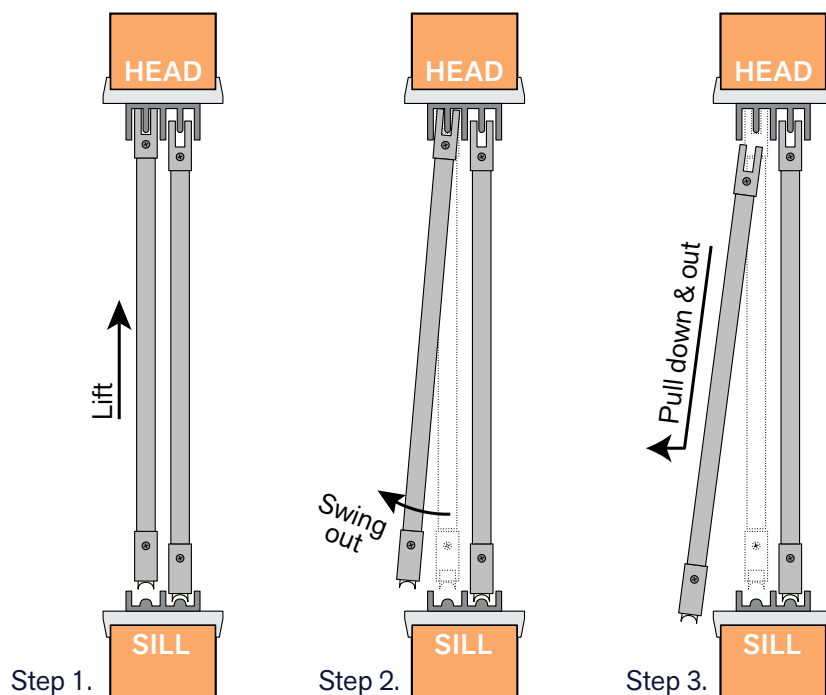

Replacing your rollers and wheel assemblies

1. Identify the adjustment mechanism (i.e. screws or nuts). Should there be no visible means of adjustment then it may be possible to lift and remove the window/door without altering it's position.

2. Loosen adjustment to allow window/door to lower.
3. With adjustment loose you should be able to lift and manoeuvre the window/door off the track and guides. (See figure a.) In some instances, such as glass patio doors, the removal of a fixed panel may be necessary in order to remove the door.
4. Rollers can be removed from panels quite easily as most are either screwed, bolted, clipped or spring loaded.
5. Assess your track for damage and cleanliness and repair or clean as required.
6. Replace rollers and check that there is no movement. Re-install windows/doors by reversal of the removal procedures.
7. It may be necessary to adjust rollers in order to ensure correct operation of latching/locking mechanism if present.

CAUTION: Take care when handling glass. For large doors a second or third person may be required to assist with removal and installation. Should you not be confident with any aspect of the above procedures we recommend you consult a qualified window or door repairer such as www.lockandroll.com.au

PLACE PRODUCT & MEASURE

KNOW YOUR ROLLERS

KNOW YOUR ROLLERS, CARRIAGES, HANGERS AND ASSOCIATED PARTS

WHAT IS A:

Roller: A roller is generally identified as a wheel which performs a rolling activity. Rollers come in various shapes and sizes and may be used as a stand-alone component or as part of an assembled unit, often referred to as a carriage or a hanger.

Carriage: A carriage is an assembly containing a wheel, or multiple wheels, used at the bottom of sliding window or door. Carriages are usually designed such that they fit into specific extrusions or cut-outs in timber and roll on a bottom track.

Hanger: A hanger is an assembly containing a wheel, or multiple wheels, used at the top of a sliding window or door. Hangers usually fit onto the face, edge or top of doors which hang from a track.

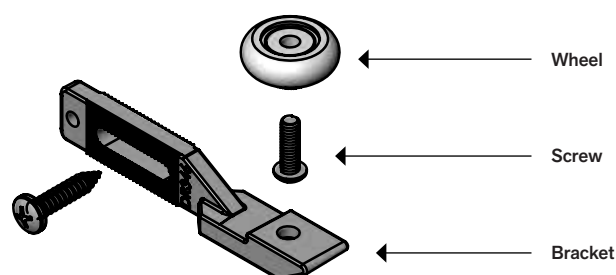

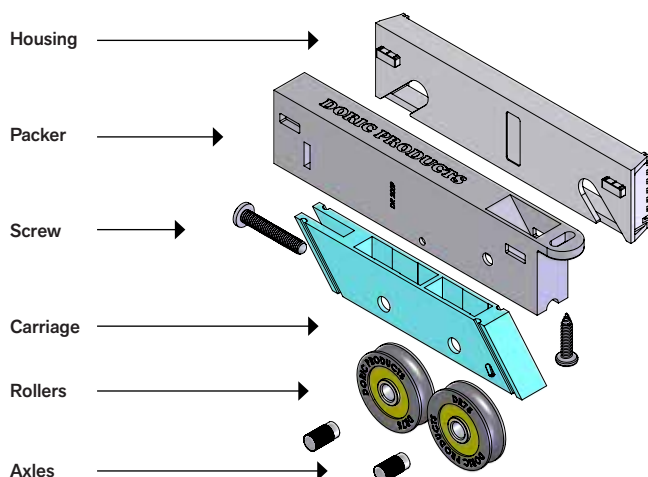

Both carriages and hangers often (but not always) contain a height adjustment mechanism.

ASSOCIATED PARTS FOR ROLLERS, CARRIAGES AND HANGERS CAN INCLUDE THE FOLLOWING:

Housing Bracket Axles Screws Packers

A housing is generally the carriage without the wheel.
A bracket is generally the hanger without the wheel.
A centre shaft or spindle on which the wheel revolves.
The fastener for wheels to hangers as well as for adjustment mechanisms and fixing hardware in place.
An add-on component used for creating, filling or maintaining a space between two items - such as a carriage inside an extrusion.

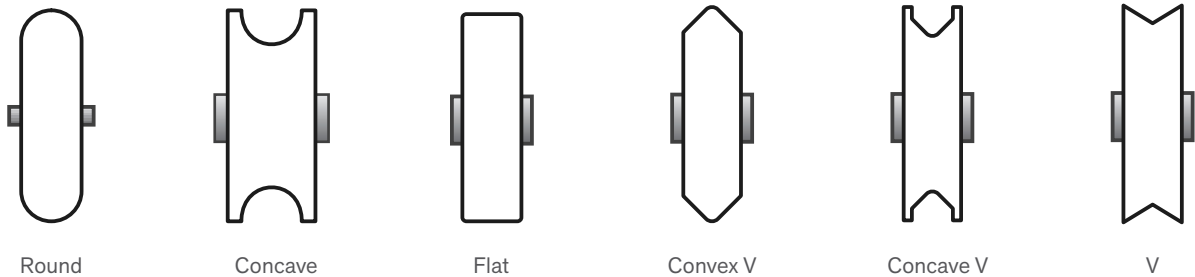

KNOW YOUR ROLLERS

KNOW YOUR ROLLERS, CARRIAGES, HANGERS AND ASSOCIATED PARTS

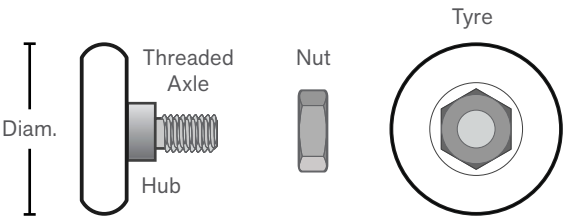

Wheels and rollers can come in a variety of shapes and sizes:

WHEEL PROFILES

Wheels, Rollers and Sheaves will generally contain one of these profiles

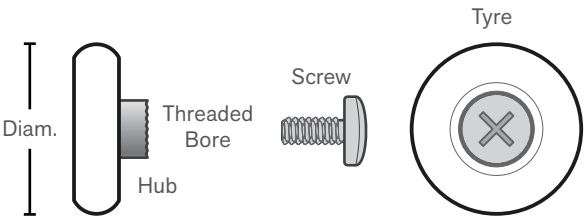

WHEEL WITH AXLE & NUT

Some units may also contain a washer(s)

Wheels with axle and nut are generally used on hangers and fix through a hole in a bracket. The nut screws over a threaded axle protruding from the wheel hub.

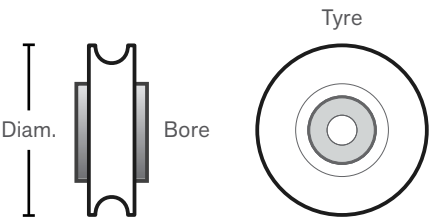

WHEEL WITH AXLE SCREW

Some units may also contain a washer(s)

Wheels with axle screw are generally used on hangers and fix through a hole in a bracket. The screw tightens into a threaded bore within the wheel hub.

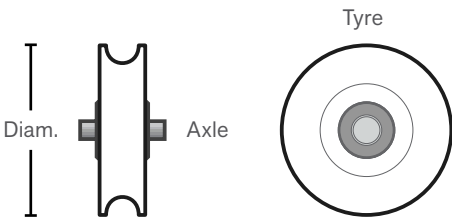

WHEEL WITH BORE

Some units may also contain a washer(s)

Wheels with bore (or hole) are generally used in carriages and fitted to housings via a rivet, a pin, a pressed axle or even a removable axle.

WHEEL WITH FIXED AXLE

Some units may also contain a washer(s)

Wheels with fixed axles are generally used in carriages and fitted to housings via a clip-in axle slot.
